Climate Neutral Car Driving

A typical fossil fuel-driven car emits about 2.718 kg of greenhouse gases per person yearly. This includes its entire lifecycle from production to recycling, based on 12.000 km driven and an average of 1,4 persons in your car. Diesel cars perform slightly better than gasoline ones. We have taken the average of them for our calculations. Most importantly, we have invested in Gold Standard Certified projects for you. These projects not only neutralize your emissions but also benefit the environment and communities. Stay safe, stay conscious, and clean it up like an Artist!
